INSIGHTS REPORT · PROTEIN RATIO

THE PROTEIN RATIO OF YOUR CATALOGUE

29 products classified one by one, two reference methodologies applied to the same product base, and what would move the figure.

Harbour Market · Catalogue 2026 DEMO REPORT

AT A GLANCE

WWF · protein-rich foods (FG1)

8.6%

Planetary Health Diet: 60%

WWF · whole diet

29.6%

Planetary Health Diet: 74%

Protein Tracker · all protein

34.9%

Fictitious retailer: Harbour Market, its departments and its volumes are invented. Products and nutrition values from Open Food Facts (ODbL).

Altera

ONE CATALOGUE, CLASSIFIED PRODUCT BY PRODUCT

The figure does not come from a sample. It comes from your whole range, crossed with your sales volumes.

29

products classified, from the barcode to the food group, out of 30 rows received: one non-food item set aside.

1,832 t

of product sold over twelve months, that is 117.4 t of protein put on the market.

60%

of the protein comes with a value declared in your file, checked. The rest comes from the Altera reference base, Open Food Facts and NEVO, plus the national table (CIQUAL in France).

THREE ANOMALIES, RESOLVED BEFORE THE CALCULATION

`ACTIVIA NATURAL YOGURT 4X125G`	barcode with a wrong check digit, found by its name: the last digit was mistyped.
`BARILLA SPAGHETTI N5 500G`	65 g of protein declared per 100 g: a per-pack figure. 13 g kept, from Open Food Facts.
`PRINGLES SOUR CREAM ONION 175G`	net weight missing, read from the till label: 0.175 kg.

- Every figure in this report recalculates in the workbook: one input column, your volumes.

Harbour Market catalogue file, 13 columns, sales over twelve months. Contents: declared values checked, Altera reference base, Open Food Facts and NEVO, plus the national table (CIQUAL in France).
Fictitious retailer: Harbour Market, its departments and its volumes are invented. Products and nutrition values from Open Food Facts (ODbL).

Altera

WHAT YOUR SHELVES WEIGH

Tonnes of product by food group, dairy in dairy equivalents (cheese ×10). Composites, 3.6% of tonnes, are reported apart.

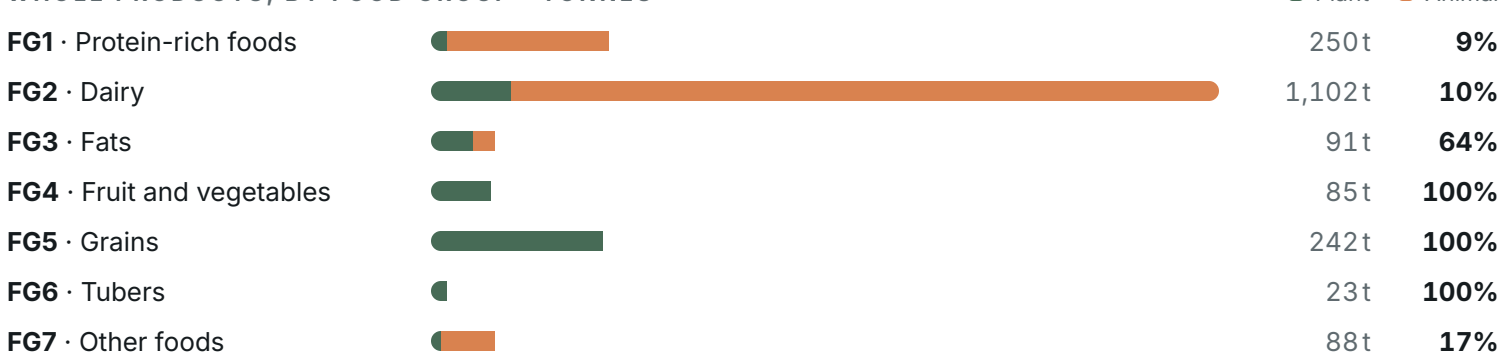

Protein-rich foods (FG1) **8.6%**

Planetary Health Diet: 60%

Dairy (FG2) **10.3%**

Whole diet (FG1 to FG7) **29.6%**

Planetary Health Diet: 74%

THE KEY POINT

Protein-rich foods are 8.6% plant against 60% in the Planetary Health Diet: minced beef, chicken, ham, tuna and eggs weigh 229 t of the group's 250 t.

- WWF counts tonnes of product: a litre of milk weighs as much as a litre of soy drink.

WWF tab of the workbook. WWF scope: 27 products, Appendix A excluded (one soft drink, one beer). Reference: Planetary Health Diet.
Fictitious retailer: Harbour Market, its departments and its volumes are invented. Products and nutrition values from Open Food Facts (ODbL).

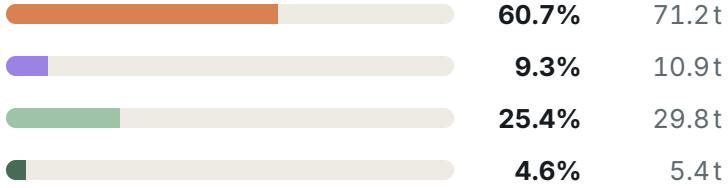

Altera

WHERE THE PROTEIN YOU SELL SITS

117.4 t of protein, spread over the methodology's four classes, each product in one class only.

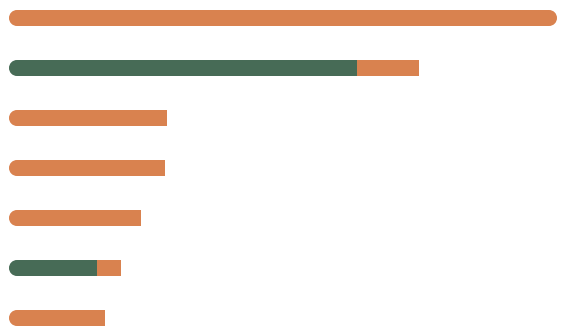

PROTEIN TRACKER · BY CLASS

Plant share of all protein **34.9%**

Animal core	**60.7%**	71.2 t
Composite	**9.3%**	10.9 t
Plant-based non-core	**25.4%**	29.8 t
Plant-based core	**4.6%**	5.4 t

BY DEPARTMENT · PROTEIN AND PLANT SHARE

Dairy	33.8 t	**0%**
Grocery	25.3 t	**85%**
Poultry	9.8 t	**0%**
Butchery	9.7 t	**0%**
Deli	8.1 t	**0%**
Breakfast	6.9 t	**78%**
Cheese	5.9 t	**0%**

THE KEY POINT

Semi-skimmed milk alone carries 17% of the protein sold: Dairy is the first department in protein, and it is 0% plant. Data level A covers 96% of the protein; the 50/50 convention applies to one pizza only.

- Protein Tracker counts protein: pasta and bread make Plant-based non-core the second class.

Protein Tracker and By department tabs of the workbook. Scope: 29 products, all food. Level B: 1 product.
Fictitious retailer: Harbour Market, its departments and its volumes are invented. Products and nutrition values from Open Food Facts (ODbL).

THE LEVERS

Altera

WHAT WOULD MOVE THE RATIO

Three shifts, calculated in the same workbook by changing the volume column only.

IF…	WWF	PROTEIN TRACKER
20% of the milk volume moves to soy drink	FG2 10.3% → **21.4%** +11.1 PTS	34.9% → **38.4%** +3.4 PTS
20% of minced beef moves to plant-based mince	FG1 8.6% → **12.5%** +3.9 PTS	34.9% → **36.4%** +1.4 PTS
Lentils, tofu and plant-based mince sell twice as much	FG1 8.6% → **15.0%** +6.4 PTS	34.9% → **36.1%** +1.2 PTS
Today	FG1 8.6% · FG2 10.3%	34.9%

THE KEY POINT

The first lever is where the tonnes are: dairy. FG1 levers move WWF more than Protein Tracker, because WWF counts tonnes of product and Protein Tracker tonnes of protein.

- Each scenario replays in the workbook: change the volumes, everything recalculates.

Scenarios at constant mass: the tonnes taken from one product are added to the other. Ratios recalculated with the workbook's rules.
Fictitious retailer: Harbour Market, its departments and its volumes are invented. Products and nutrition values from Open Food Facts (ODbL).
