INSIGHTS REPORT · PROTEIN RATIO

THE PROTEIN RATIO OF YOUR CATALOGUE

29 products classified one by one, two reference methodologies applied to the same product base, and what would move the figure.

Harbour Market · Catalogue 2026

Product data: Open Food Facts (ODbL), NEVO and CIQUAL.

AT A GLANCE

WWF · Protein-Rich Foods (FG1)

15.5%

Planetary Health Diet: 60%

WWF · whole diet

28.9%

Planetary Health Diet: 74%

Protein Tracker · all protein

59.2%

Altera

ONE CATALOGUE, CLASSIFIED PRODUCT BY PRODUCT

The figure does not come from a sample. It comes from your whole range, crossed with your sales volumes.

29

products classified, from the barcode to the food group, out of 30 rows received: one non-food item set aside.

1,814t

of product sold over twelve months, that is 183.9t of protein put on the market.

84%

of the protein comes with a value declared in your file, checked. The rest comes from the Altera reference database, Open Food Facts and NEVO, plus the national table (CIQUAL in France).

THREE ANOMALIES, DECIDED BEFORE THE CALCULATION

`NUTELLA HAZELNUT SPREAD 400G`	ingredient list of another product: kept as received at your request, to confirm.
`PRINGLES SOUR CREAM ONION 175G`	net weight missing, read from the till label: 0.175 kg.
`BARILLA SPAGHETTI N5 500G`	65 g of protein declared per 100 g, likely a per-pack figure: kept at your request, to confirm.

- Every figure in this report recalculates in the workbook: one input column, your volumes.

Harbour Market catalogue file, 13 columns, sales over twelve months. Contents: declared values checked, Altera reference database, Open Food Facts and NEVO, plus the national table (CIQUAL in France).

Product data: Open Food Facts (ODbL), NEVO and CIQUAL.

Altera

WHAT YOUR SHELVES WEIGH

Tonnes of product by food group, dairy in dairy equivalents (cheese ×10). Composites, 3.6% of tonnes, are reported apart.

Protein-Rich Foods (FG1) **15.5%**

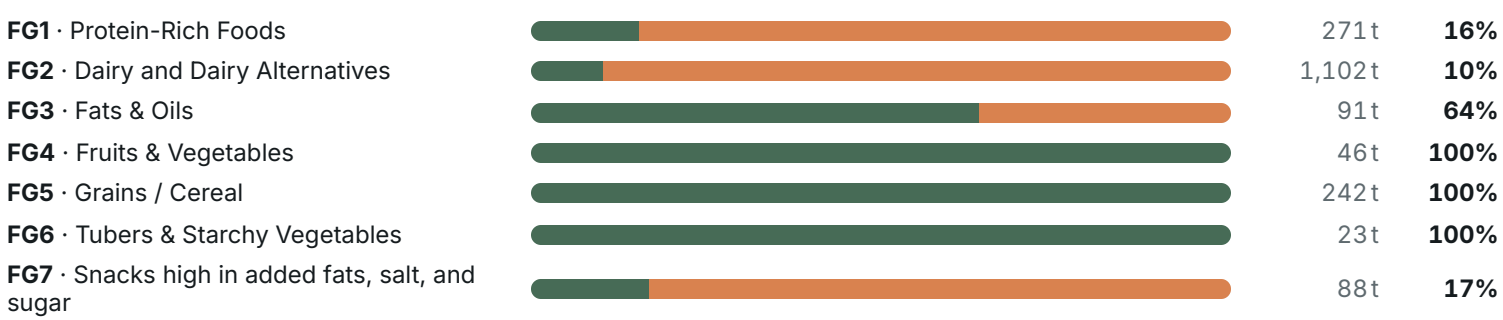

Planetary Health Diet: 60%

Dairy and Dairy Alternatives (FG2) **10.3%**

Whole diet (FG1 to FG7) **28.9%**

Planetary Health Diet: 74%

WHOLE PRODUCTS · PLANT SHARE OF EACH FOOD GROUP

THE KEY POINT

Protein-Rich Foods are 15.5% plant against 60% in the Planetary Health Diet: minced beef, chicken, ham, tuna and eggs weigh 229 t of the group's 271 t.

- WWF counts tonnes of product: a litre of milk weighs as much as a litre of soy drink.

WWF tab of the workbook. WWF scope: 27 products, after the exclusion list (one soft drink, one beer). Reference: Planetary Health Diet.
Product data: Open Food Facts (ODbL), NEVO and CIQUAL.

Altera

WHERE THE PROTEIN YOU SELL SITS

183.9 t of protein, spread over the methodology's four groups, each product in one group only.

PROTEIN TRACKER · BY GROUP

Plant share of all protein **59.2%**

Animal core	**39.4%**	72.5 t
Animal-plant-based composite	**5.2%**	9.6 t
Plant-based non-core	**51.8%**	95.3 t
Plant-based core	**3.5%**	6.5 t

CORE GROUPS BY SUB-GROUP · PROTEIN

PLANT-BASED CORE		
Beans and pulses	2.1 t	**1%**
Nuts and seeds	0.7 t	**0%**
Plant-based alternatives	3.6 t	**2%**
ANIMAL CORE		
Milk, yoghurts and creams	23.0 t	**12%**
Red meat	17.8 t	**10%**
Poultry	9.8 t	**5%**
Eggs	10.6 t	**6%**
Fish and seafood	3.8 t	**2%**
Cheese	5.9 t	**3%**
Other	1.6 t	**1%**

THE KEY POINT

Semi-skimmed milk alone carries 11% of the protein sold: "Milk, yoghurts and creams" is the first sub-group of Animal core. Data level A covers 97% of the protein; the 50/50 convention applies to one pizza only.

- Protein Tracker counts protein: pasta and bread make Plant-based non-core the first group.

Protein Tracker tab of the workbook. Scope: 29 products, all food. Level B: 1 product.
Product data: Open Food Facts (ODbL), NEVO and CIQUAL.

Altera

WHAT WOULD MOVE THE RATIO

Three shifts, calculated in the same workbook by changing the volume column only.

IF…	WWF	PROTEIN TRACKER
20% of the milk volume moves to soy drink	FG2 10.3% → **21.4%** +11.1 PTS	59.2% → **61.4%** +2.2 PTS
20% of minced beef moves to plant-based mince	FG1 15.5% → **19.1%** +3.6 PTS	59.2% → **60.1%** +1.0 PTS
Lentils, tofu and plant-based mince sell twice as much	FG1 15.5% → **21.0%** +5.5 PTS	59.2% → **59.6%** +0.5 PTS
Today	FG1 15.5% · FG2 10.3%	59.2%

THE KEY POINT

The first lever is where the tonnes are: dairy. FG1 levers move WWF more than Protein Tracker, because WWF counts tonnes of product and Protein Tracker tonnes of protein.

- Each scenario replays in the workbook: change the volumes, everything recalculates.

Scenarios at constant mass: the tonnes taken from one product are added to the other. Ratios recalculated with the workbook's rules.
Product data: Open Food Facts (ODbL), NEVO and CIQUAL.
